EAIVP FORENSIC ANALYSIS REPORT

Explainable AI Visualisation Platform | Mensor XAI

CASE REFERENCE	layerdig-19ce20e926e
TIMESTAMP	2026-03-12T12:38:51.758Z
ANALYST AGENT	Librarian_v2.0
PLATFORM	EAIVP — Mensor XAI

COMBINED VERDICT: MEDIUM

ALETHEIA PRISM — TRIAD ANALYSIS SUMMARY

LENS A — BYTE SPACE	LENS B — PIXEL SPACE	LENS C — SIGNWAVE
LOW	**N/A**	**MEDIUM**
Confidence: 60.1%	Confidence: 0.0%	Confidence: 70.3%
Entropy: 4.808 b/b	Status: not_applicable	Tier: 3

FILE METADATA

File Name	layer-__-digital-tectonics-gpgpu-testing-chat.zip
File Type	ZIP
File Size	411681 bytes
SHA-256	c1cadb38cfeba9649865d1358c51f127dbfd6bad9a28379e60f93fdbc7ab5249

LENS A — BYTE SPACE ENTROPY ANALYSIS

Measured Entropy	4.808 bits/byte
Expected Range	3.0–8.0
Assessment	Anomalous — review recommended
Lens Verdict	LOW

LENS B — PIXEL SPACE STRUCTURAL ANALYSIS

Lens B operates on pixel-space data only. This file type (ZIP) cannot be decoded as image data — pixel-space analysis was not performed.

LENS C — SIGNWAVE SPECTRAL ANALYSIS

Lens Verdict	MEDIUM
Confidence	70.3%

Tier	3
Spectral Flatness	0.6751
Resonance Score	1.3269
Depth Score	0.0729
Dominant Frequencies	0.0156, 0.0195, 0.0117, 0.0234, 0.0078

Anomaly Flags

ELEVATED_SPECTRAL_FLATNESS: above-baseline randomness detected

FORENSIC NARRATIVE

The combined analysis warrants a MEDIUM verdict due to conflicting but concerning data characteristics. The primary driver for this verdict is the Signwave Spectral analysis (LENS C), which detected an 'ELEVATED_SPECTRAL_FLATNESS' anomaly with a value of 0.6751. This indicates that the frequency distribution of byte values within the file is significantly more uniform and random than expected, similar to white noise. Such a characteristic is a strong indicator of intentional data obfuscation, strong compression beyond typical text, or encryption, suggesting an attempt to obscure the file's true content. This finding takes precedence given its high confidence and specific anomaly flag. Conversely, the Byte Space Entropy (LENS A) reports a LOW entropy of 4.808 bits/byte. For a ZIP file, which by nature involves compression, one might expect a moderately higher entropy value, but a low reading combined with high spectral flatness could suggest a specific type of encoding or obfuscation that flattens spectral content without maximizing overall Shannon entropy, or perhaps highly repetitive content that has been subsequently obfuscated. The Pixel Space analysis (LENS B) was not applicable, as expected for a ZIP archive. Therefore, the strong spectral signal of obfuscation or encryption, despite the lower overall byte entropy, necessitates further scrutiny.

THREAT INDICATORS

ELEVATED_SPECTRAL_FLATNESS (0.6751) detected, suggesting above-baseline randomness indicative of potential obfuscation or encryption within the file., Low Byte Space Entropy (4.808 bits/byte) for a ZIP file, which, in conjunction with high spectral flatness, points to unusual data characteristics requiring deeper investigation.

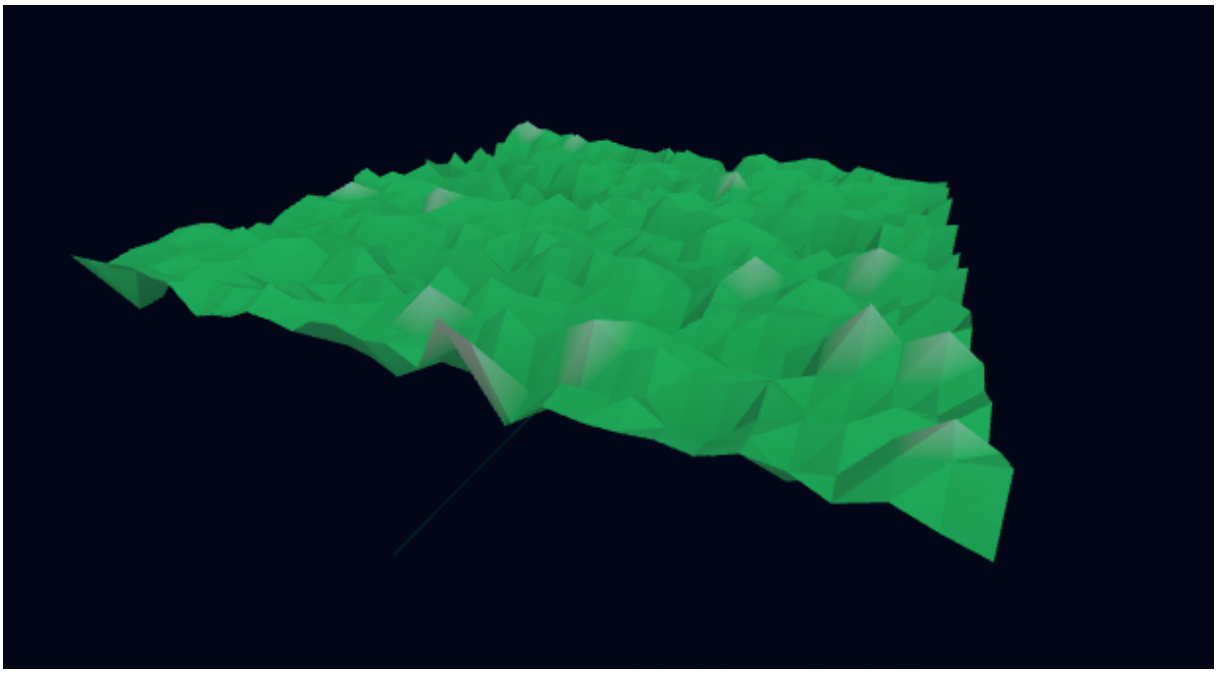
RECOMMENDED ACTION

Treat this file with caution. Verify its origin and intended purpose before opening. Consider seeking a second opinion from your security team.

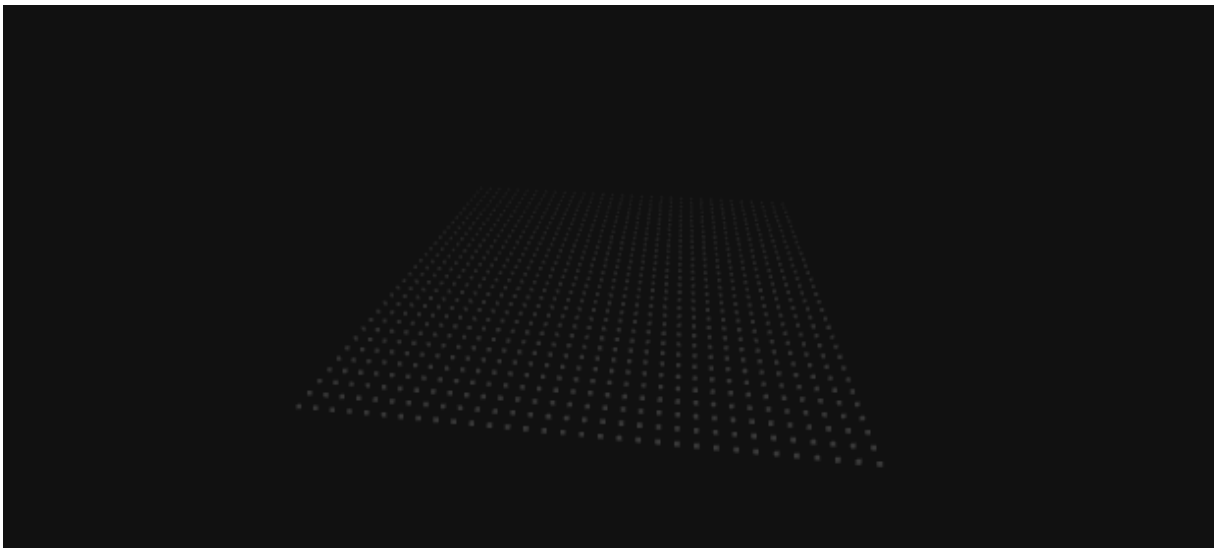
ALETHEIA PRISM — TERRAIN VISUALISATIONS

3D terrain captures from live analysis session. Height = local entropy / signal intensity. Flat plateaus = uniform/compressed data. Peaks = high-entropy regions consistent with encryption or packing.

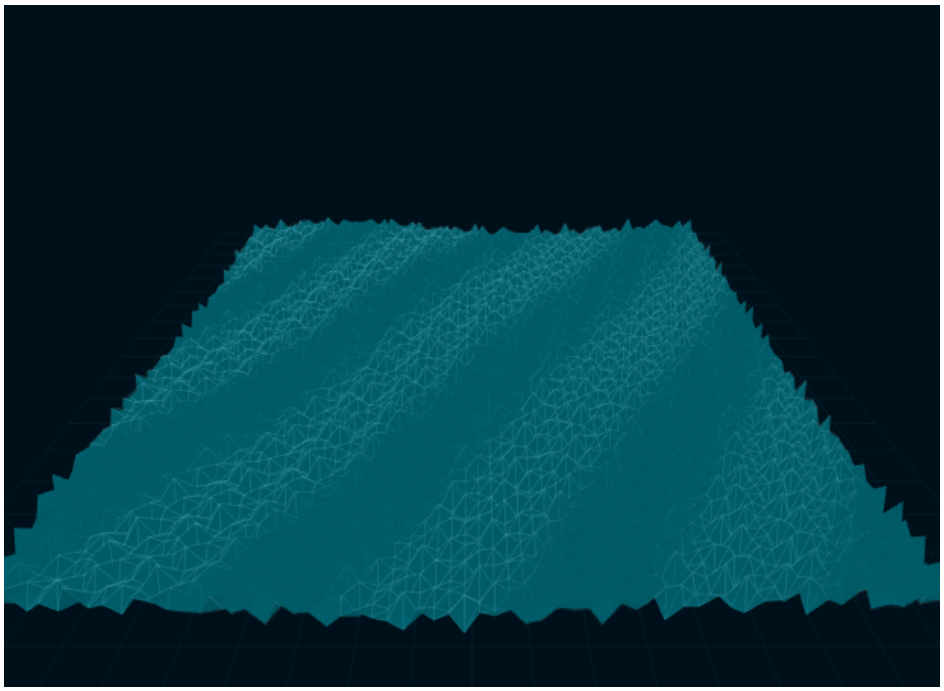
LENS A — BYTE SPACE ENTROPY TERRAIN



LENS B — PIXEL SPACE TERRAIN



LENS C — SIGNWAVE TERRAIN



Canvas captures from live Aletheia Prism analysis.
